

Vision

We are making the future of energy sustainable by providing our customers with renewable, accessible and affordable energy infrastructure while taking a responsible approach.

Mission

We tailor our energy solutions specifically to the varying needs of our customers. We connect people with energy across borders. Together, we are creating secure access to decarbonised and affordable energy. To ensure a reliable supply of energy, we are building the infrastructure of tomorrow. As a cooperative, we have always operated in the spirit of partnership and made far-sighted decisions.

We bundle energy.

Based on the above, we have set the following strategic priorities:

- We focus on the needs of our target customers in relation to decarbonising their energy supply.
- We use our assets and combine our products to create intelligent product solutions that are tailored to our customers' needs and deliver the highest possible utility («asset-based utility platform»).
- We pool our internal expertise, dedication and strengths across all segments in order to succeed together.
